

## AmericanAirFilter®

### AmAir® 300X

### AmAir® HT

#### 1", 2" and 4" Extended Surface Pleated Panel Filters

- Expanded metal pleat support grid (AmAir® 300X filter)
- High loft media increases dust holding capacity
- Excellent primary filter to prevent dust build-up on heating and cooling coils, fans, and ductwork
- Excellent prefilter for higher efficiency filters
- Directly interchangeable with disposable panel filters, media pads in metal frames, or permanent filters used in built-up filter banks and side access systems. No modifications are necessary to frames or latches.
- 4" filters have pleat stabilizers to ensure uniform spacing and increase rigidity (AmAir® 300X filter)

#### AmAir® 300X Filters

AmAir 300X filters are constructed with AAF's totally unitized, double wall, die-cut box, beverage board frame. The media pack is bonded inside the frame at all points of contact. AmAir 300X filters are built rugged for durability and reliability under tough service conditions. The AmAir 300X filter is a MERV 7 in accordance with ASHRAE Standard 52.2.

#### Superior Strength

AmAir 300X filters are extremely strong and durable, with all components rigidly bonded into a totally unitized construction. The filters will not rack or deteriorate under normal operating conditions, including high moisture applications.

An expanded metal grid laminated to the air leaving side of the media creates more consistent pleat shape and maintains uniform pleat spacing. Expanded metal also increases the stability of the pleat pack, reducing media flutter during operation.

The media pack support retainers, which are an integral part of the frame, are bonded to the pleats on both the air entering and the air leaving sides. This increases rigidity and also helps maintain proper spacing between pleats for maximum dust holding capacity while minimizing resistance.

AmAir® 300X filters meet the performance requirements of the most demanding applications.

#### AmAir® HT High Temperature Filters

The AmAir HT filter is designed for applications with continuous operating temperatures up to 500°F (260°C). The frame is an aluminized steel U-channel, with the media pack bonded to the inside on all four edges. An expanded aluminized steel faceguard is spot welded inside the frame on the air-leaving side to retain the media pack at elevated temperatures. AmAir HT filters are made with micro-glass media, and is a MERV 8 in accordance with ASHRAE Standard 52.2.

- (1) Additional AmAir 300X sizes available:  
 10x20x1    14x20x1    15x20x1    18x24x1    25x25x1    15x20x2    16x24x2    25x25x2  
 12x12x1    14x25x1    16x16x1    18x25x1    12x20x2    16x16x2    18x25x2    24x20x4
- (2) Other standard size and special size AmAir 300X filters are available in handmade construction assembled from four beverage board strips. The filters are stapled in each corner with the pleated media pack bonded to the inside of the frame. Special sizes are available in the same construction, or can be made from standard size filters which are cut down and "capped" with beverage board strips.
- (3) Width and height dimensions are interchangeable. All AmAir filters may be installed with the pleats either vertical or horizontal.
